Bayesian Networks

· Nodes are random variables.

Bayesian Networks

- Nodes are random variables.
- Edges denote direct impact

• Grass can be wet due to multiple reasons:

- Grass can be wet due to multiple reasons:
 - Rain

- Grass can be wet due to multiple reasons:
 - Rain
 - Sprinkler

- Grass can be wet due to multiple reasons:
 - Rain
 - Sprinkler
- Also, if it rains, then sprinkler need not be used.

Bayesian Nets

 $P(X_1, X_2, X_3, \dots, X_N)$ denotes the joint probability, where X_i are random variables.

$$P(X_1, X_2, X_3, \dots, X_N) = \prod_{k=1}^N P(X_k | parents(X_k))$$

$$P(S,G,R) = P(G|S,R)P(S|R)P(R)$$

- $y \in \{0,1\}$ where 0 means not spam and 1 means spam

- $y \in \{0,1\}$ where 0 means not spam and 1 means spam
- From the emails construct a vector X.

- $y \in \{0,1\}$ where 0 means not spam and 1 means spam
- From the emails construct a vector X.

```
\begin{bmatrix} a \\ an \\ \vdots \\ computer \\ \vdots \\ lotery \\ \vdots \\ 200 \end{bmatrix} \} N \text{ words}
```

- $y \in \{0,1\}$ where 0 means not spam and 1 means spam
- From the emails construct a vector X.

```
\begin{bmatrix}
a \\
an \\
\vdots \\
computer \\
\vdots \\
lotery \\
\vdots \\
200
\end{bmatrix}

N words
```

 The vector has ones if the word is present, and zeros is the word is absent.

- $y \in \{0,1\}$ where 0 means not spam and 1 means spam
- From the emails construct a vector X.

```
an
:
computer
:
lotery
:
200
```

- The vector has ones if the word is present, and zeros is the word is absent.
- Each email corresponds to vector/feature of length N containing zeros or ones.

Classification model

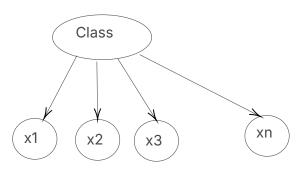

- · Classification model
- Scalable

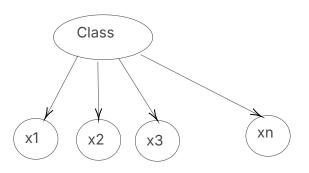

- Classification model
- Scalable
- Generative and Bayesian

- Classification model
- Scalable
- · Generative and Bayesian
- Usually a simple/good baselines

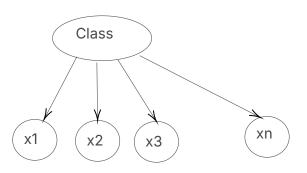

- Classification model
- Scalable
- · Generative and Bayesian
- Usually a simple/good baselines
- We want to model P(class(y) | features (x))

- Classification model
- Scalable
- Generative and Bayesian
- · Usually a simple/good baselines
- We want to model P(class(y) | features (x))
- We can use Bayes rule as follows: $P(class(y) \mid features(x)) = \frac{P(features(x) \mid class(y))P(class(y))}{P(features(x))}$

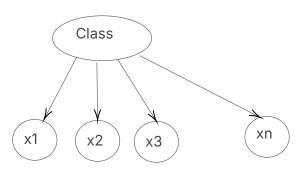

$$P(x_1, x_2, x_3, \dots, x_N | y) = P(x_1 | y) P(x_2 | y) \dots P(x_N | y)$$

$$P(x_1, x_2, x_3, \dots, x_N | y) = P(x_1 | y) P(x_2 | y) \dots P(x_N | y)$$

Why is Naive Bayes model called Naive?

$$P(x_1, x_2, x_3, \dots, x_N | y) = P(x_1 | y) P(x_2 | y) \dots P(x_N | y)$$

Why is Naive Bayes model called Naive? Naive assumption x_i and x_{i+1} are independent given y

i.e.
$$p(x_2 | x_1, y) = p(x_2 | y)$$

Frame Title

It assumes that the features are independent during modelling, which is generally not the case.

What do we need to predict?

$$P(y|x_1, x_2, ..., x_N) = \frac{P(x_1, x_2, ..., x_N|y)P(y)}{P(x_1, x_2, ..., x_N)}$$

Probability of x_i being a spam email

$$P(x_i = 1 | y = 1) = \frac{\mathsf{Count}(x_i = 1 \text{ and } y = 1)}{\mathsf{Count}(y = 1)}$$

Similarly,

$$P(x_i = 0 | y = 1) = \frac{\mathsf{Count}(x_i = 0 \text{ and } y = 1)}{\mathsf{Count}(y = 1)}$$

Spam Mail classification

$$P(y=1) = \frac{\mathsf{Count}\; (y=1)}{\mathsf{Count}\; (y=1) + \mathsf{Count}\; (y=0)}$$

Similarly,

$$P(y=0) = \frac{\mathsf{Count}\; (y=0)}{\mathsf{Count}\; (y=1) + \mathsf{Count}\; (y=0)}$$

lets assume that dictionary is $[w_1, w_2, w_3]$

| Index | W_1 | W_2 | W ₃ | У |
|-------|-------|-------|-----------------------|---|
| 1 | 0 | 0 | 0 | 1 |
| 2 | 0 | 0 | 0 | 0 |
| 3 | 0 | 0 | 0 | 1 |
| 4 | 1 | 0 | 0 | 0 |
| 5 | 1 | 0 | 1 | 1 |
| 6 | 1 | 1 | 1 | 0 |
| 7 | 1 | 1 | 1 | 1 |
| 8 | 1 | 1 | 0 | 0 |
| 9 | 0 | 1 | 1 | 0 |
| 10 | 0 | 1 | 1 | 1 |

if
$$y=0$$

•
$$P(w_1 = 0|y = 0) = \frac{3}{5} = 0.6$$

$$P(y=0) = 0.5$$

Similarly, if y=1

$$P(y=1) = 0.5$$

if
$$y=0$$

- $P(w_1 = 0|y = 0) = \frac{3}{5} = 0.6$
- $P(w_2 = 0|y = 0) = \frac{2}{5} = 0.4$

$$P(y=0) = 0.5$$

Similarly, if y=1

$$P(y=1) = 0.5$$

if
$$y=0$$

•
$$P(w_1 = 0|y = 0) = \frac{3}{5} = 0.6$$

•
$$P(w_2 = 0|y = 0) = \frac{2}{5} = 0.4$$

•
$$P(\mathbf{w}_3 = 0 | \mathbf{y} = 0) = \frac{3}{5} = 0.6$$

$$P(y=0) = 0.5$$

Similarly, if y=1

$$P(y=1) = 0.5$$

if
$$y=0$$

•
$$P(w_1 = 0|y = 0) = \frac{3}{5} = 0.6$$

•
$$P(w_2 = 0|y = 0) = \frac{2}{5} = 0.4$$

•
$$P(\mathbf{w}_3 = 0 | \mathbf{y} = 0) = \frac{3}{5} = 0.6$$

$$P(y=0) = 0.5$$

Similarly, if y=1

•
$$P(w_1 = 1|y = 1) = \frac{2}{5} = 0.4$$

$$P(y=1) = 0.5$$

if
$$y=0$$

•
$$P(w_1 = 0|y = 0) = \frac{3}{5} = 0.6$$

•
$$P(w_2 = 0|y = 0) = \frac{2}{5} = 0.4$$

•
$$P(\mathbf{w}_3 = 0 | \mathbf{y} = 0) = \frac{3}{5} = 0.6$$

$$P(y=0) = 0.5$$

Similarly, if y=1

•
$$P(w_1 = 1|y = 1) = \frac{2}{5} = 0.4$$

•
$$P(w_2 = 1|y = 1) = \frac{1}{5} = 0.2$$

$$P(y=1) = 0.5$$

if
$$y=0$$

•
$$P(w_1 = 0|y = 0) = \frac{3}{5} = 0.6$$

•
$$P(\mathbf{w}_2 = 0 | \mathbf{y} = 0) = \frac{2}{5} = 0.4$$

•
$$P(w_3 = 0|y = 0) = \frac{3}{5} = 0.6$$

$$P(y=0) = 0.5$$

Similarly, if y=1

•
$$P(w_1 = 1|y = 1) = \frac{2}{5} = 0.4$$

•
$$P(w_2 = 1|y = 1) = \frac{1}{5} = 0.2$$

•
$$P(w_3 = 1|y = 1) = \frac{3}{5} = 0.6$$

$$P(y=1) = 0.5$$

Given, test email 0,0,1, classify using naive bayes

Given, test email 0,0,1, classify using naive bayes

$$P(y = 1|w_1 = 0, w_2 = 0, w_3 = 1)$$

$$= \frac{P(w_1 = 0|y = 1)P(w_2 = 0|y = 1)P(w_3 = 1|y = 1)P(y = 1)}{P(w_1 = 0, w_2 = 0, w_3 = 1)}$$

$$= \frac{0.6 \times 0.8 \times 0.6 \times 0.5}{Z}$$

Spam Classification

Given, test email 0,0,1, classify using naive bayes

$$P(y = 1|w_1 = 0, w_2 = 0, w_3 = 1)$$

$$= \frac{P(w_1 = 0|y = 1)P(w_2 = 0|y = 1)P(w_3 = 1|y = 1)P(y = 1)}{P(w_1 = 0, w_2 = 0, w_3 = 1)}$$

$$= \frac{0.6 \times 0.8 \times 0.6 \times 0.5}{Z}$$

Similarly, we can calculate

$$P(y = 0|w_1 = 0, w_2 = 0, w_3 = 1) = \frac{0.6*0.4*0.6*0.5}{Z}$$

Spam Classification

Given, test email 0,0,1, classify using naive bayes

$$P(y = 1|w_1 = 0, w_2 = 0, w_3 = 1)$$

$$= \frac{P(w_1 = 0|y = 1)P(w_2 = 0|y = 1)P(w_3 = 1|y = 1)P(y = 1)}{P(w_1 = 0, w_2 = 0, w_3 = 1)}$$

$$= \frac{0.6 \times 0.8 \times 0.6 \times 0.5}{Z}$$

Similarly, we can calculate

$$P(y=0|w_1=0,w_2=0,w_3=1)=\frac{0.6*0.4*0.6*0.5}{Z}$$
 $\frac{P(y=1|w_1=0,w_2=0,w_3=1)}{P(y=0|w_1=0,w_2=0,w_3=1)}=2>1.$ Thus, classified as a spam example.

 "This product is pathetic". We would assume the sentiment of such a sentence to be negative. Why? Presence of "pathetic"

- "This product is pathetic". We would assume the sentiment of such a sentence to be negative. Why? Presenece of "pathetic"
- Naive bayes would store the probabilities of words belonging to positive or negative sentiment.

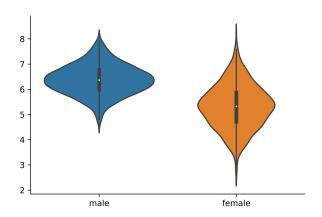

- "This product is pathetic". We would assume the sentiment of such a sentence to be negative. Why? Presenece of "pathetic"
- Naive bayes would store the probabilities of words belonging to positive or negative sentiment.
- · Good is positive, Bad is negative

- "This product is pathetic". We would assume the sentiment of such a sentence to be negative. Why? Presenece of "pathetic"
- Naive bayes would store the probabilities of words belonging to positive or negative sentiment.
- · Good is positive, Bad is negative
- What about: This product is not bad. Naive Bayes is very naive and does not account for sequential aspect of data.

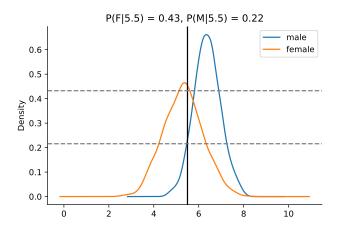

Let us generate some normally distributed height data assuming Height (male) $\sim \mathcal{N}(\mu_1 = 6.1, \sigma_1^2 = 0.6)$ and Height (female) $\sim \mathcal{N}(\mu_2 = 5.3, \sigma_2^2 = 0.9)$

Let us generate some normally distributed height data assuming Height (male) $\sim \mathcal{N}(\mu_1 = 6.1, \sigma_1^2 = 0.6)$ and Height (female) $\sim \mathcal{N}(\mu_2 = 5.3, \sigma_2^2 = 0.9)$

Would you expect a person to height 5.5 as a female or male? And why?

We have classes $C_1, C_2, C_3, \dots, C_k$ There is a continuous attribute x For Class k

•
$$\mu_k = Mean(x|y(x) = C_k)$$

We have classes $C_1, C_2, C_3, \dots, C_k$ There is a continuous attribute x For Class k

- $\mu_k = Mean(x|y(x) = C_k)$
- $\sigma_k^2 = Variance(x|y(x) = C_k)$

Now for x = some observation 'v'

$$P(x = v|C_k) = \frac{1}{\sqrt{2\pi\sigma_k^2}} \exp^{\frac{-(v-\mu_k)^2}{2\sigma_k^2}}$$

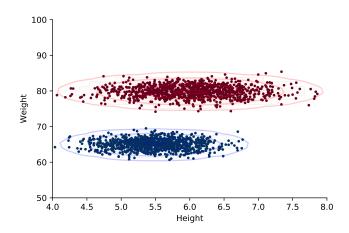

Gaussian Naive Bayes (2d example)

Would you expect a person to height 5.5 and weight 80 as a female or male? And why?

Gaussian Naive Bayes (2d example)

Would you expect a person to height 5.5 and weight 80 as a female or male? And why?

Note: no cross covariance! Remember all features are independent.

Wikipedia Example

| Height | Weight | Footsize | Gender |
|--------|--------|----------|--------|
| 6 | 180 | 12 | М |
| 5.92 | 190 | 11 | M |
| 5.58 | 170 | 12 | М |
| 5.92 | 165 | 10 | М |
| 5 | 100 | 6 | F |
| 5.5 | 100 | 6 | F |
| 5.42 | 130 | 7 | F |
| 5.75 | 150 | 7 | F |

Example

| | Male | Female |
|-------------------|----------------------|----------------------|
| Mean (height) | 5.855 | 5.41 |
| Variance (height) | 3.5×10^{-2} | 9.7×10^{-2} |
| Mean (weight) | 176.25 | 132.5 |
| Variance (weight) | 1.22×10^{2} | 5.5×10^{2} |
| Mean (Foot) | 11.25 | 7.5 |
| Variance (Foot) | 9.7×10^{-1} | 1.67 |

• Given height = 6ft, weight = 130 lbs, feet = 8 units, classify if it's male or female.

- Given height = 6ft, weight = 130 lbs, feet = 8 units, classify if it's male or female.
- P(F|6ft, 130lbs, 8units) = P(6ft|F)P(130lbs|F)P(8units|F)P(F)P(130lbs, 8units, 6ft)

- Given height = 6ft, weight = 130 lbs, feet = 8 units, classify if it's male or female.
- P(F|6ft, 130lbs, 8units) = P(6ft|F)P(130lbs|F)P(8units|F)P(F)P(130lbs, 8units, 6ft)
- $P(130lbs|F) = \frac{1}{\sqrt{2\pi \times 550}} \times \exp{\frac{-(132.5 130)^2}{2 \times 550}} = .0167$

- Given height = 6ft, weight = 130 lbs, feet = 8 units, classify if it's male or female.
- P(F|6ft, 130lbs, 8units) = P(6ft|F)P(130lbs|F)P(8units|F)P(F)P(130lbs, 8units, 6ft)
- $P(130lbs|F) = \frac{1}{\sqrt{2\pi \times 550}} \times \exp{\frac{-(132.5 130)^2}{2 \times 550}} = .0167$
- Finally, we get probability of female given data is greater than the probability of class being male given data.
